HCLTech | Supercharging Progress™

AI Force for Oracle

One platform connecting
your every Oracle environment

Enterprises face growing pressure to modernize faster, simplify operations and realize measurable value from technology investments. Yet many transformation programs fall short of delivering tangible business results.

The root cause is complexity.

Most organizations operate within diverse Oracle ecosystems spanning Oracle Fusion Cloud Application, Oracle On-Premises Applications, NetSuite, Oracle Industry solutions and hybrid integrations, each at varying levels of AI readiness and process maturity. As organizations modernize, adopt AI and improve service delivery, this complexity often slows execution, creates silos and increases dependence on manual work.

Result: slower delivery, higher operational risk and delayed value realization.

Our approach

Native-first, transformation-next

Maximize Oracle's built-in AI before building what's missing

The question today is no longer whether to adopt AI, but how to apply it in a way that is pragmatic, governed and aligned with enterprise objectives.

HCLTech begins by helping clients extract full value from Oracle's native AI capabilities — including embedded AI features and prebuilt agents available through Oracle Fusion AI Agent Studio. This ensures faster adoption, reduced complexity and alignment with Oracle's product roadmap.

Where native capabilities fall short of addressing unique business or industry needs, we extend the value through AI Force for Oracle.

What is AI Force for Oracle?

From pilot to production:
An AI-led platform built for complex Oracle environments

AI Force for Oracle is HCLTech's platform designed to transform Oracle environments with speed, predictability and control.

Built on a native-first foundation, it extends Oracle's embedded AI with enterprise-grade platform capabilities, domain-aligned AI agents, custom AI solutions and proven accelerators.

This enables organizations to move beyond fragmented AI initiatives toward cohesive, enterprise-wide execution across implementation, optimization and managed services.

Result: faster delivery, stronger governance and sustained business value from Oracle investments.

AI Force across the full Oracle lifecycle

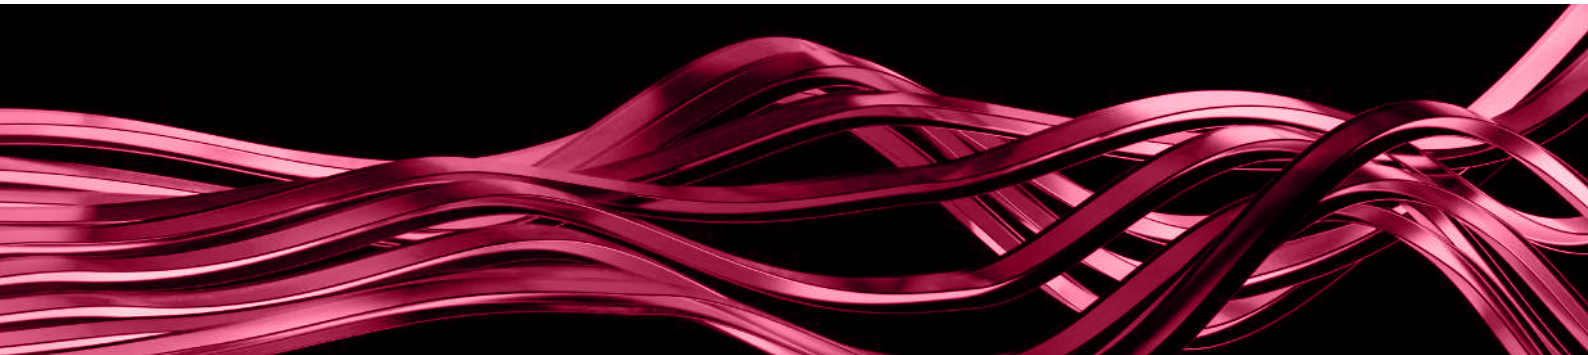

From strategy and design through operations and continuous improvement

AI Force for Oracle orchestrates automation and intelligence across the entire Oracle lifecycle - from strategy and design to implementation, optimization and ongoing operations.

By extending Oracle native-AI, it provides a secure and scalable foundation for integration and execution across cloud applications, on-premises applications and hybrid environment. This ensures consistent AI adoption without introducing disconnected tools or fragmented operating models.

Result: greater reliability, improved efficiency and a foundation for ongoing optimization and continuous improvement.

Oracle Business Transformation	AI-powered finance and compliance operations	Improves speed, accuracy and control across finance processes
	AI-driven supply chain, procurement and commercial operations	Enhances process efficiency across sourcing, fulfillment and commercial operations
	AI-assisted workforce and business decision support	Improves decision-making across HR, advisory and business operations
Oracle Service Transformation	AI-accelerated implementation	Accelerates Oracle design, build, test and rollout while improving delivery quality and adoption
	AI-driven run and support operations	Improves service continuity and operational efficiency
	AI-enabled quality control and service assurance	Strengthens governance, visibility and support consistency

Where AI delivers real business value

Focused on outcomes across transformation services and operations

AI Force for Oracle focuses on high-impact areas where AI delivers real business value:

- Accelerate transformation across planning, design, testing and rollout
- Enhance service quality through AI-driven governance, issue prevention and remediation
- Improve visibility and control with intelligent insights and automation
- Deliver prebuilt AI solutions and Value Stream Agents across core business processes

Spanning both fusion cloud applications and on-premises applications environments, it enables organizations to modernize operations, improve service delivery and scale AI adoption across the enterprise.

Oracle Business Transformation

Business value innovation

Enables innovation across the value chain:

- Accelerates the journey from ideation to business value
- AI-led automation and intelligent operations to improve process performance, service quality and execution control

Common business benefits

- Faster time-to-value
- Improved working capital and operational efficiency
- Better user experience and decision support

Oracle Service Transformation

Operation transformation

Reduce manual effort with:

- Predictive monitoring and data observability
- Intelligent ticket triage and incident remediation
- Zero-touch operations and root cause analysis, achieving

20-30%
Reduction in ticket volume

15-25%
Reduction in IT support cost

30-40%
Reduction in resolution time

Implementation and engineering

Accelerate delivery of high-quality Oracle solutions with:

- AI-assisted requirements, design and document generation
- Faster build, test, release and deployment cycles
- Change impact analysis, rollout support and delivery scaling, achieving

15-30%
Productivity improvement across the delivery lifecycle

25-40%
Improvement in testing efficiency

10-25%
Faster deployment cycles

Legacy modernization

Reduce technical debt and accelerate transformation with:

- Oracle On-Premises Applications modernization
- Upgrade acceleration, remediation and code refactoring
- Process, integration and platform modernization

30-50%
Reduction in time to modernize

25-40%
Faster code refactoring and remediation

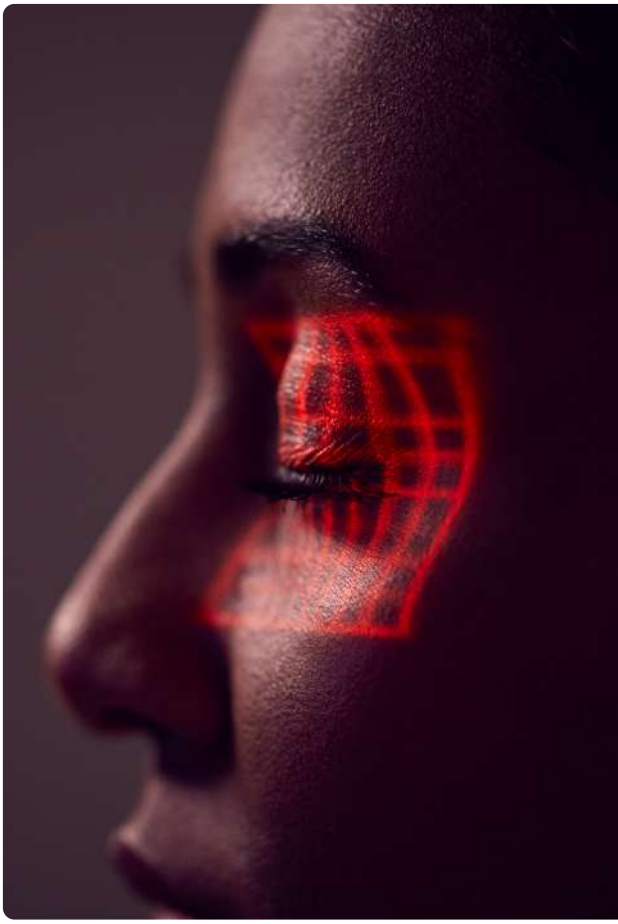

20-35%
Reduction in migration effort

Outcomes that are measurable and sustained

Business and service results that go beyond the implementation phase

AI Force for Oracle delivers across both business and service dimensions:

- Faster Oracle modernization and cloud transformation
- Reduced execution risk through AI-led governance and automation
- Accelerated adoption of enterprise AI agents
- Domain-driven process improvements using prebuilt AI solutions
- Scalable, upgrade-ready architecture enabling continuous innovation

AI Force grabs analysts' attention for its breakthrough value

Business and service results that go beyond the implementation phase

> It has also built the HCLTech AI Force suite of solutions, which supports enterprises across critical business domains, including software development, customer support and bot creation."

AVASANT
EMPOWERING BEYOND

> It has strengthened its market position and enhanced client engagement due to the increased adoption of its flagship AI IPs, driven by the success of AI Force among multiple clients."
